

Grimdark Forge — Changelog

Repository **UniSem2** · branch **main** · window: 2026-09-15 12:00 to 2026-09-17 12:00 AEST (48 hours) · generated 2026-09-17

Summary

A single commit falls inside the window; the working tree is clean and no other branch has activity in the period. The previous commit (81b7cbd) is dated 2026-08-14.

Field	Value
Commit	afd34c9602d4ae37307156823259e8976cdacd0d
Date	2026-09-17 12:20:50 +1000
Author	Augustus Zibell-Barnes
Files changed	76 (48 added, 25 deleted, 3 modified — 24 of the additions replace deleted pages)
Lines	+9,073 / -6,478
Nature	Assessment Task 1 → Assessment Task 2 conversion: the static 25-page HTML site is replaced by a dynamic PHP site with a server-side shared shell, session-based login, in-memory data store, CSRF protection, two-stage validation and en-AU / de-DE locales.

Note: the commit message is a pasted `git status` listing rather than a description, so it appears as a wall of file names in `git log --oneline`.

1. Static HTML pages removed (25 files)

Area	Removed
Root	about.html, account.html, categories.html, sitemap.html, welcome.html
Blog	posts.html, post.html, new-post.html, edit-post.html, delete-post.html
Forum	boards.html, thread.html, new-thread.html, edit-post.html, delete-post.html
Reviews	reviews.html, review.html, new-review.html, edit-review.html, delete-review.html
Shop	catalogue.html, product.html, cart.html, checkout.html, order-confirmation.html

sitemap.html has no PHP replacement, so the site goes from 25 pages to 24.

2. PHP page replacements (24 files)

One .php file for every deleted page except the sitemap. Most pages shrank because the shell moved into shared includes; the shop pages grew because they now perform real work.

Page	HTML lines	PHP lines	Page	HTML lines	PHP lines
about	170	75	forum/boards	275	179
account	263	286	forum/thread	329	187
categories	179	63	forum/new-thread	190	174
welcome	300	174	forum/edit-post	190	222
blog/posts	317	195	forum/delete-post	190	154
blog/post	314	287	reviews/reviews	339	238
blog/new-post	200	104	reviews/review	204	155
blog/edit-post	214	126	reviews/new-review	225	117
blog/delete-post	191	130	reviews/edit-review	213	120
shop/catalogue	377	243	reviews/delete-review	196	122
shop/product	276	215	shop/checkout	319	354

Page	HTML lines	PHP lines	Page	HTML lines	PHP lines
shop/cart	314	420	shop/order-confirmation	266	205

3. New per-module library files (7 files)

File	Lines	Purpose
blog/lib.php	132	Blog data access and helpers
blog/form.php	77	Shared form partial used by new-post and edit-post
forum/lib.php	200	Forum data access, thread and reply helpers
forum/render.php	75	Threaded-reply rendering
reviews/lib.php	116	Review data access and rating breakdown
reviews/form.php	82	Shared form partial used by new-review and edit-review
shop/lib.php	233	Catalogue filters, cart and order helpers

4. New shared layer — shared/ (11 files, about 2,500 lines)

File	Lines	Purpose
shared/bootstrap.php	607	Session start, gf_base() path helper, CSRF tokens, login state, ownership checks (HTTP 403 on non-owner edit/delete)
shared/data.php	425	Seed data for all four modules
shared/store.php	131	In-memory store shared by all visitors
shared/validation.php	232	Server-side validation rules
shared/header.php	110	Site header incl. locale switch, cart/account links, log in / log out control
shared/nav.php	22	Primary navigation
shared/footer.php	27	Footer and footer navigation
shared/i18n.php	56	Translation lookup
shared/locale.php	26	Locale selection, stored in the PHP session
shared/lang/de-DE.php	778	Full German string table
shared/images.php	109	Image handling

5. New JavaScript (3 files)

The AT1 site contained no `<script>` elements; these are the first JavaScript files in the project.

File	Lines	Purpose
assets/js/validate.js	326	Client-side validation driven by data-* attributes, mirroring the PHP rules; blocks submission and renders inline and summary errors
assets/js/site.js	165	Locale-switch menu and general page behaviour
assets/js/shop.js	99	Cart interactions

6. Assets

- `assets/css/components.css` (+162 lines): `.is-pct-0 ... .is-pct-100` width classes in 5% steps for rating-breakdown bars; `.field__error` and `.form-errors` styles rendered by both PHP and JavaScript; `.locale-switch / .locale-menu` styles for the header locale button.
- `assets/img/avatar-default.svg` (new): avatar shown in the header when a user is logged in.

7. Documentation

- **README.md** (283 lines changed): retitled for Assessment Task 2; the AT1 “Constraints observed” section (no JavaScript, no frameworks, no inline styles, no remote requests) is replaced by “How the requirements are met”; new sections **Test accounts**, **Locales** and **How to run locally** (<http://127.0.0.1:8790/welcome.php>); “Verification performed” rewritten around PHP-rendered output, end-to-end HTTP tests and `php -l`; the “What does not work, and why” section is dropped.
- **CHARTER.md** (108 lines changed): updated for AT2. The shell is now documented as server-side (`shared/header.php`, `nav.php`, `footer.php`); the hard-coded signed-in user is replaced by session login/logout with ownership enforced at HTTP 403; `<html lang>` now follows the active locale; section 3 changes from “planning decision only” to “implemented as agreed” with a confirmation under each original decision.
- **SUMMARY_REPORT.md** (127 lines) and **SUMMARY_REPORT.pdf** (130 KB): new submission report.
